

## **Legance announces the adoption of Legora across all practice areas of the firm**

**Completed in three months, one of the most extensive artificial intelligence implementations in the Italian legal market, with the integration of Legora into the firm's operational processes.**

*Milan, June 18, 2026* – Legance has extended the use of Legora to all its professionals, completing one of the most extensive artificial intelligence implementations in the Italian legal market in terms of scale and operational approach. Legora, an agentic AI platform for legal professionals, is used by over 100,000 users across 1,200 of the leading law firms and in-house legal departments in more than 50 markets worldwide. The solution is now available across all practice areas of the firm and at every level of seniority.

Founded in 2007, Legance is an independent full-service law firm with offices in Milan, Rome, and London. The adoption of Legora is part of the firm's broader innovation and technological development journey undertaken in recent years. The implementation, completed within three months, involved a dedicated Legora team, Legance's entire IT department, and representatives from each of the firm's practice areas, with the goal of making the platform available to all professionals. The project was carried out with the strategic and operational support of Irnerius, a consulting firm founded by Andrea Arosio and dedicated to AI in the legal sector.

*"The decision to adopt Legora at firm level was made following an in-depth analysis conducted with the support of our Chief Information Officer, Roberto Cantuccio, the involvement of our Innovation and Strategy Committee, and a large number of colleagues,"* said **Monica Colombera, Senior Partner and Head of Innovation & Strategic Committee at Legance**. *"After the first months of broad implementation of Legora, the initial results have been extremely encouraging. Efficiency gains are certainly an important component of the value offered by AI tools such as Legora, but our experience suggests that the real potential lies elsewhere. We do not see AI simply as a tool to perform existing activities faster. Rather, we see it as an enabler of a new generation of legal services, allowing us to offer our clients increasingly sophisticated, personalized, and strategic advice."*

Legance's practice covers the full spectrum of services typical of a full-service law firm, including corporate law, finance, litigation and dispute resolution, regulatory matters, and legal advisory work. In each of these areas, Legora supports lawyers in research, review, and drafting activities in complex transactions, enabling teams to handle a higher volume of work without compromising the high-quality standards expected by clients.

*"Legance is one of the most reputable independent law firms in Europe, and the way it approached this project perfectly explains why,"* said **Max Junestrand, CEO and Co-Founder of Legora**. *"From the outset, it chose to proceed with a firm-wide implementation and invested in the people and planning required to do it properly. A project of this scale, completed in such a short time, is rare in any market. It reflects the vision of a firm that sees artificial intelligence as strategic and foundational infrastructure."*
